

IIC Grupo EP Partners with nex-G in Spain on infrastructure wireless projects

Singapore - June 21th, 2007 – At CommunicAsia 2007, nex-G announced today a two year EUR 5.5 million distribution agreement and municipal broadband project partnership with IIC Gruppo EP in Spain. The distribution agreement enable IIC Gruppo EP to offer nex-G's high-throughput Mesh Wi-Fi with a complete end-to-end municipal network solution to their Spain customers that will also extend to select Latin American countries on government sponsored projects in support of the digital divide programme in these developing Spanish speaking nations. This agreement will develop to include a combination of both Mesh Wi-Fi and Mobile WiMAX products and solutions that will be deployed over the next three to five years. The deployment roll out is planned to start later this year.

“We're pleased to partner with nex-G as they share our commitment to offering a superior customer experience by enabling customers to enjoy the benefits of unwired services,” said Javier Andreu , Executive Director, IIC Gruppo EP, “By expanding the reach of our services and solutions through our existing customers and in our own distribution channels, we believe we have an opportunity to significantly expand our business opportunity in the Telecommunications sector.”

“nex-G is committed to providing the best quality and latest in leading-edge products and solutions in Mesh Wi-Fi and Mobile WiMAX, and with IIC Grupo EP we continue that commitment by offering a next-generation wireless broadband technology,” said Ronnie Persad, CEO, nex-G. “Our ability to offer a low cost high performance end-to-end wireless broadband municipal infrastructure is a strong competitive alternative that we believe will help increase our customer base.”

About nex-G

nex-G is a global wireless network solution provider with a focused mission to build and enable high throughput wireless transmission technologies in multi-service, multi-radio, for Mesh Wi-Fi and WiMAX. nex-G designs, develops and manufactures highly capable carrier class wireless broadband solutions that are resilient, high performance wireless mesh networking systems. nex-G delivers maximum RF performance and throughput with various innovations on network switching, routing and modular in architecture, through its industry-capable excellence in its founding team's experience in the broadband industry.

nex-G is a member of the WiMAX Forum.
